Run Description

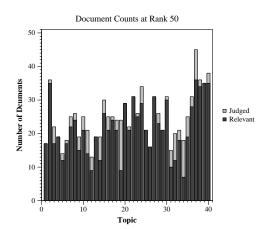

For the first 35 topics, re-rank the output provided by UIowaS_Rd3Borda, creating one linear SVM classifier per topic (using highly-relevant and non-relevant documents for the topic from qrel-rnd1 and q rel-rnd2). Re-ranking is done based on prediction probability. Preprocessing includes stop word removal and conversion of text to lowercase. TF-IDF for vector representation of a document considering unigrams and bigrams. The last five topics are the same as in UIowaS_Rd3Borda.
