Run Description

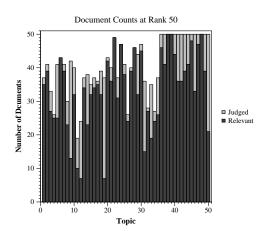

Reciprocal rank fusion of two runs - both employ Terrier, BM25 weighting with relevance feedback. Both use all query fields - we did add the word Covid to the question field of all topics. In the first run we used 10 relevant documents to expand the query by 300 terms. In the second run we used 30 documents to expand the query by 1000 terms. Reciprocal rank fusion was done on these two runs. Retrieval was done against the metadata title and abstract fields. For the 5 new topics we did a Terrier, TF_IDF retrieval feedback run, 10 documents, 20 expansion query terms. The queries were as above, But the dataset was limited to filtered documents from the metadata title and abstract. Each retained document has to have a word in a pre-defined list described in our run 1 documentation. Unlike our run1, we did not do any additional filtering based on the date of the document.

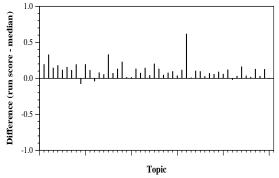

Summary Statistics	
Run ID	UIowaS_Run2
Topic type	feedback
Contributed to judgment sets?	yes

Overall measures		
Number of topics	50	
Total number retrieved	49894	
Total relevant	10910	
Total relevant retrieved	7336	
MAP	0.3766	
Mean Bpref	0.5723	
Mean NDCG@20	0.7714	
Mean RBP(p=0.5)	0.8608 + 0.0009	

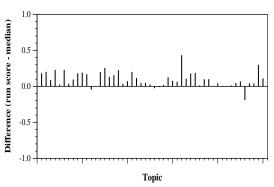

Document Level Averages		
	Precision	
At 5 docs	0.9040	
At 10 docs	0.8680	
At 15 docs	0.8493	
At $20 docs$	0.8200	
At 30 docs	0.7553	
R-Precision		
Exact	0.4128	

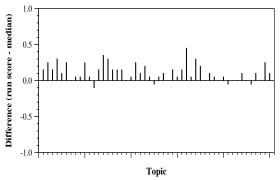

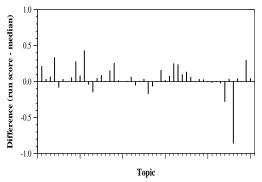

Per-topic difference from median NDCG@20 for all Round 4 runs
